Let A and B be matrices. Then in general, $A \times B \neq B \times A$. (not commutative.)

E.g.
$$\begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 0 & 0 \\ 2 & 0 \end{bmatrix} = \begin{bmatrix} 2 & 0 \\ 0 & 0 \end{bmatrix}$$

Inverse and transpose

Not all numbers have an inverse.

Matrix inverse:

If A is an m x m matrix, and if it has an inverse,

$$A^{-1} = A^{-1}A = I.$$

Eg. [3 4] [0.4 -0.1] = [1.7]

[2 16] [0.4 -0.1] = [1.7]

12 > (12-1) = 1

Matrices that don't have an inverse are "singular" or "degenerate"

Matrix Transpose

Example:
$$A = 3 \cdot 5 \cdot 9$$

$$\mathbf{B} = \underline{A^T} = \begin{pmatrix} 1 \\ 2 \\ 5 \\ 0 \end{pmatrix} \begin{pmatrix} 3 \\ 5 \\ 9 \end{pmatrix}$$

Let A be an $\underline{\mathbf{m}}$ $\underline{\mathbf{x}}$ $\underline{\mathbf{n}}$ matrix, and let $B = A^T$. Then B is an $\underline{\mathbf{n}}$ $\underline{\mathbf{x}}$ $\underline{\mathbf{m}}$ matrix, and

$$B_{\underline{i}\underline{j}} = A_{\underline{j}\underline{i}}.$$

$$B_{12} = A_{21} = 2$$

$$B_{32} = 9$$

$$A_{23} = 9$$
